

## **Retreat Plumbing**

Retreats pipe work is all laid on top of the flooring insulation layer:

Joists are laid then the base is insulated (above)

The Joists are notched for the pipework to be laid (above)

The plumbing pipework is laid on top of the insulation layer (left)

Retreat uses rodent resistant pipework in all of its homes. Unlike some plastic pipe systems, Rodents and Vermin are not attracted to Firmopress Multilayer Pipe. The Firmopress MLCP system includes an aluminium barrier layer which is of similar resistance to metal pipework.
